

The Sun

Flesch-Kincaid: 2.9 | Words: 98

The sun is a giant star in the sky. It provides heat, light, and energy. Each day the Earth turns slowly in a circle. This makes the Sun look like it is moving across the sky. The sun rises in the morning and sets in the evening. During the day, you see the sun in the sky because you are facing the sun. At night, it is shining on the other side of our planet. The sun is important to our Earth. Plants and animals need sunlight to grow. Without the sun, it would be cold and dark.
